HOSE & FITTINGS

A SINGER INDUSTRIAL COMPANY

A large industrial injection molding machine in a factory setting. The machine is primarily blue with white and red components. It features a large hopper at the top, various pipes, hoses, and electrical conduits. The machine is mounted on a blue base with yellow safety markings. The background shows a factory floor with yellow safety lines.

HOSE & COUPLINGS FOR THE INJECTION MOLDING INDUSTRY

Injection molding continues to grow as needs for packaging and plastic based products increases. The demanding applications of molding production lines require hose and couplings that won't cause unnecessary shutdowns during production. Shutting down a high-volume production line means teardown, cleaning, recalibration, loss of material and manpower.

Don't risk your production on inexpensive catalog company alternatives; come to knowledgeable industry experts that will help with best-in-class products that will keep you up and running. We stock bulk and can make assemblies to meet your needs for Push Lock Hose, Teflon Lined Stainless Steel, Hydraulic Hose, Pneumatic Tubing, Brass Push Lock Fittings, Molding and Pneumatic Quick Disconnects, Expansion Joins and more. Call us, we are here to help with any product recommendations.

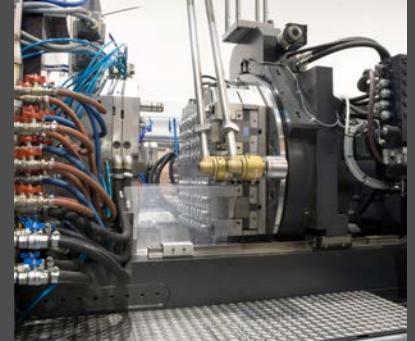

HOSE & COUPLINGS

FOR THE INJECTION MOLDING INDUSTRY

We represent the major brand of Push Lock hose including Continental Instagrip, Gates LOC Lock-On, and Rubberworx™ PushLock. Red, Blue, and Black hose offerings are standard and are available in bulk reel quantities and premade assembled lengths. Push lock hose is designed for easy push in installation with push lock hose barbs. For high pressure or high temperature applications clamping is still recommended. We offer Worm Drive, Oetiker Pinch clamps, and more for hose end fastening needs.

Injection molding couplings are the staple of quick change or molds on lines without threaded or clamping connections. We partner with Dixon Valve & Coupling for the best molding couplers made in the USA in North Carolina. Don't settle for inexpensive alternatives that can leak or wear out quickly. The trusted Dixon couplings will keep your injection molding equipment up and running.

PRODUCTS FOR INJECTION MOLDING

PUSH LOCK HOSES

MOLDING COUPLERS

PELLET SUCTION HOSE

STAINLESS BRAIDED TEFLON

RUBBER EXPANSION JOINTS

HYDRAULIC HOSES

Experts in Injection Molding Products

- Push Lock in Blue, Red, Black
- USA Made Molding Couplers
- Brass Push Lock Fittings
- Brass Adapters
- Designed for Continuous Cycles
- High Abrasion Resistant Urethane
- Oetiker Pinch Clamps & Tools
- Worm Drive Clamps
- Static Dissipating Ducting
- Grounded PVC Suction
